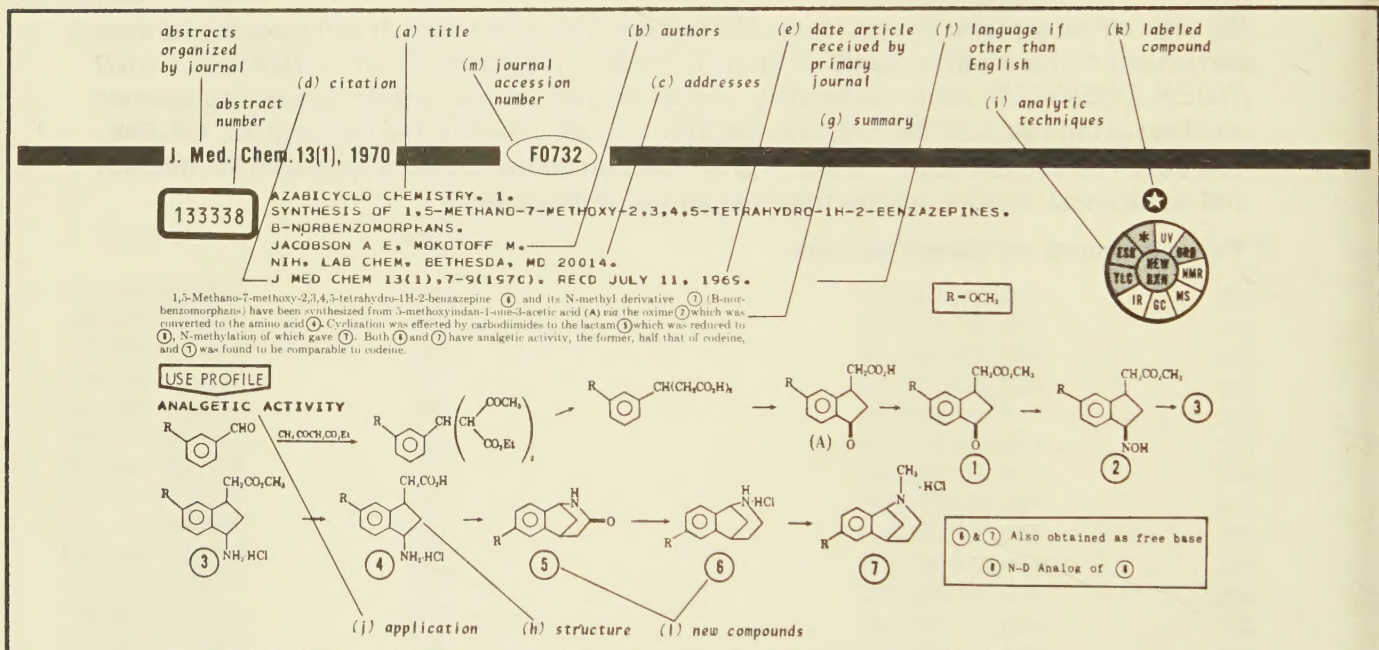
Instructions for Binding CURRENT ABSTRACTS OF CHEMISTRY AND INDEX CHEMICUS™

We urge all subscribers to bind issues 319 through 370 at this time. It will probably be most convenient to have each volume of your *CURRENT ABSTRACTS OF CHEMISTRY AND INDEX CHEMICUS* bound separately, and to imprint on the outside, identifying abstract numbers as follows: Vol. **36**, 125,572-134,876; Vol. **37**, 134,877-146,047; Vol **38**, 146,048-158,864; Vol. **39**, 158,865-171,532. This Annual Cumulative Index replaces both the monthly and semiannual interim indexes that have appeared previously.

Your comments are always welcome.



The fastest, easiest-to-use chemical abstracting service ever.

And the only one that reports papers within 30 to 40 days of their primary publication.

Current Abstracts of Chemistry and Index Chemicus™ (CAC&IC™) provides full, weekly coverage of the literature in structural and organic chemistry. Emphasis is on new compounds and reactions reported in the world's most important chemical journals. *CAC&IC* is indexed monthly, cumulated semiannually and annually. The indexing is by journal, author, molecular formula, application, and subject.

Here's a typical abstract. Over 20,000 articles and 150,000 new compounds will be covered in this graphic, comprehensive format this year. Compounds and new reactions are depicted by easy-to-read structural diagrams. Analytical techniques used by the author are indicated on the *wheel* at the right. The *star* reports the presence of labeled compounds.

Need we say more?

ISI® Institute for Scientific Information

CAC-264

325 Chestnut Street, Philadelphia, Pennsylvania 19106, USA
132 High Street, Uxbridge, Middlesex, UK

Cable: SCINFO

Gentlemen: Please send me details on **CAC&IC™ (CURRENT ABSTRACTS OF CHEMISTRY AND INDEX CHEMICUS™)**. Please include information on the following ISI Services of related interest:

☐ **CSI™ (CHEMICAL SUBSTRUCTURE INDEX™)** These monthly indexes to CAC&IC list new chemical compounds in a unique way that lets you perform manual substructure searches quickly and easily.

☐ **ASCA® (AUTOMATIC SUBJECT CITATION ALERT)** A custom multidisciplinary information service in which ISI's computer searches the literature as fast as it appears and alerts you each week to specific items relevant to your interests as you have defined them.

☐ **SCI® (SCIENCE CITATION INDEX®)** This comprehensive, multidisciplinary index to science and technology enables you to conduct literature searches and research evaluations. Issued quarterly and cumulated annually, SCI is based on the concept of citation indexing, pioneered and developed by ISI.

☐ **CC®/PCS (CURRENT CONTENTS®/PHYSICAL & CHEMICAL SCIENCES)** This weekly current awareness publication reproduces, in original format, the table of contents pages of every issue of more than 800 of the world's leading journals in the physical and chemical sciences and includes a weekly Author Address Directory.

If you're still searching with chemical name or molecular formula indexes, you're behind the times.

Now, you can subscribe to *Chemical Substructure Index.*™ It enables you, for the first time, to conduct highly efficient manual searches for new compounds containing specified chemical substructures or fragments. Quickly. Inexpensively.

Chemical Substructure Index gets new chemical compound information to you faster. You get monthly indexes of new compounds just weeks after they first appear in *Current Abstracts of Chemistry,* ISI's weekly chemical abstracting service.

The *Chemical Substructure Index* is an alphabetical listing of Wiswesser Line Notation descriptions of each of the 150,000 new chemical compounds reported in *Current Abstracts of Chemistry & Index Chemicus*™ *(CAC&IC*™*)* each year. It serves as a substructure guide to the new compound section of *CAC&IC,* where bibliographic and backup data may be found along with structural and reaction flow diagrams, profiles of uses for which the compound was tested, and the instrumentation used to analyze the compound.

Chemical Substructure Index is the only index organized for quick, efficient searching for all types of compound fragments. For example, you can quickly locate a specific furan derivative, all furans that contain a nitro group, all Nmethylcarbamates, phenothiazines with piperazine in a side chain, cyclic *and* acyclic anhydrides, or heterocyclic compounds containing a trifluoromethyl substituent. In most cases, they can be found listed in one place. And to further help you quickly scan the Index for compounds of interest, structural diagrams of frequently occurring substructures are included on every page.

Formerly, this Index was available only as part of a chemical data package that cost nearly $10,000 per year. Now, the CSI™ can be purchased as a separate publication at a cost of $1,000 a year. You get two copies: one for your library, one for circulation. Additional copies cost $200 each. As soon as you begin to get these indexes, you automatically build a retrospective capability. Back issues are also available to new subscribers.

Spend less time digging . . . more time on research. Save product development money for your organization. Save research time and effort for yourself. Send coupon for further information.

Do you dig?

Do you spend too much of your time digging for chemical compounds and structures?
Now for the first time, you can conduct substructure searches— easily, quickly, economically.
